

OPEN POSITION

We have an opening for the following position available at Centurion Cargo.

AVIONICS TECHNICIAN

Reports to: Maintenance Manager

Hours: Flexible Shift

Job Description Summary

Responsible for inspecting, testing, adjusting, and repairing avionics equipment, such as radar, radio, pulse, navigation, auto pilot, and compass systems.

Essential Functions:

- Inspects components of avionics equipment for defects, such as loose connections and frayed wire, and for accuracy of assembly and installation.
- Tests avionics equipment under simulated or actual operating conditions to determine performance and airworthiness, using test equipment, such as oscilloscopes, digital meters and counters, and circuit analyzers.
- Adjusts, repairs, or replaces defective components based on analysis of test results, following blueprints, schematics, handbooks, and other technical documents, using hand tools.
- Calibrates installed or repaired equipment to prescribed specifications.
- Sign overhaul documents for equipment replaced or repaired.
- Operate ground station for air-to-station check of radar or other equipment.
- Perform other duties as assigned or required.

Required Education/Experience

- Minimum three (3) years experience in aircraft avionics installation, inspection, maintenance and repair required.
- Graduate of two (2) year electronics/avionics technical school or equivalent military experience required.
- Must have experience with working from blueprint drawings, diagram, specifications, service manuals, sketches, templates, and other incomplete data.

License/Certification

- Current FAA issued Mechanic certificate with both Airframe & Powerplant ratings is preferred but not required.
- Current Radiotelephone License issued by Federal Communications Commission (FCC) is preferred but not required.
